DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-8, drawn to toners, classified in class 430, subclass 107.1.
- II. Claims 9-24, drawn to image forming apparatus, classified in class 399, subclass 223.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as forming independently an ionographic image on a dielectric surface, developing each image independently by a toner, and then transferring each toner to a receiver independently. These steps are repeated for each of the colored toners. See MPEP § 806.05(d).

Applicants are advised that the toner does not impart a patentable limitation on the apparatus of group II because the toner is a material worked upon by the apparatus. This is shown by the recitation of superposing the toners in the apparatus claims (see claims 9-15). The material worked upon by an apparatus is not a structural component of the apparatus and does not provide a positive limitation to the apparatus. See MPEP 2114 & 2115. As such, the apparatus of claims 9-15, does not contain the toner as a positive limitation. Claims 16-24 do not contain recitations of the toners of Group I.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Art Unit: 1756

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
